Remi Bench Top Orbital Shaking Incubator Model CIS 18 Plus finds application in researches on bacteria, cultivation, fermentation, hybridization, chemical and biochemical reaction, enzymes and tissues research, which have a high requirement on precision of shaking speed and temperature

Construction: Its shell is made of engineering plastics through molding with a mechanical oscillating tray driven by a motor fitted at the bottom. The Oscillating locus is circular. The duct plate behind the working chamber is SS thin plate and all the operating keys on the LCD screen are on the front side. **Box door** Is of a big flap structure made of transparent plastics to facilitate observation, removal or placement of cultures. Closed-loop control of temperature and speed is effected with microcomputer electronic controller using PID regulation mode with LCD screen display. Hot and cold air stream is circulated through a blower behind the duct plate in the working chamber, thereby improving the uniformity of temperature in the working chamber.

Safety Multiple start of compressor in a short time is prevented and the controller performs the function of prolonged start before compressor is started.

When the measured temperature is in excess of the set temperature by 3°C, the buzzer will give an over-temperature alarm and simultaneously the heater will shut down. When the box door opens, the door switch will cut off the power to stop the Heater, blower and rotating fan from work and the operator can remove or place the cultures safely.

Salient Features :

- Stainless-steel chamber and platform easy to clean
- Transparent plastic door
- Microprocessor controller with large LCD screen for temperature and shaking speed with timing function
- Self-check function easy to identify problems
- Smooth start and stop system prevents liquid spillage

Vacuum ovens are very versatile pieces of equipment with applications in laboratory research, engineering, and industry. Vacuum oven is generally used for drying of substances which are hygroscopic and heat sensitive and is based on the principle of creating a vacuum to decrease the chamber pressure below the vapour pressure of the water causing it to boil. It can be filled with inert gases, especially for rapid drying of some compound material. The low pressure environment also minimizes oxidation during drying.

RVO-50

The materials to be dried are kept on trays and pressure is reduced by means of vacuum pump. Steam is passed through the space between trays and jacket, so that heat transfer occurs by conduction. The oven door is locked airtight and connected to vacuum pump to reduce the pressure. Microprocessor controller with digital display ensures precise and homogenous temperature control. Dual layer tempered glass door is provided for clear observation. Adjustable aluminum expansion shelves ensure optimal heat transfer within oven chamber.

CO$_2$ Incubator

CO$_2$ incubators find applications in tissue engineered products, in-vitro fertilization, diagnostics, cancer research and other medical, pharmaceutical related industries. CO$_2$ incubators are used to culture cells to provide it with the optimum temperature, moisture (sterile environment) and to maintain optimum pH under a CO$_2$ atmosphere.

Salient Features :

- Imported infrared CO$_2$ Sensor.

- CO$_2$ concentration Restoration Speed.

- Polished stainless-steel chamber, rounded corners for easy cleaning. Adjustable shelves.

- Microorganism Filter at Inlet provides 99% filtration of bacteria and dust (Φ<0.3um) and supplies pure CO$_2$ into the incubator.

- Door temperature controller prevents condensate water on glass door of incubator effectively.

- Independent audio-visual temperature limiting alarm system.

- Alarm function for temperature difference, CO$_2$ over concentration and concentration difference, door open time, UV working status.

- Automatic control of fan speed to maintain uniform temperature and prevent damage to samples.

- Hot air sterilizing circulation system.

- PID controller with large LCD screen ensures precise and reliable control
