| <a href="#">ALBERT'S METACHROMATIC STAINS KIT</a> NA<br>It demonstrates the presence of metachromatic granules found in Corynebacterium diphtheriae. The granules stain purple -black against light green counterstained cytoplasm. It helps to distinguish Corynebacterium diphtheriae from most of the short nonpathogenic diphtheroids which lack granules. Contains: Albert's stain A solution (Product code 00823) -125 ml and Albert's stain B solution (Product code 00824) -125 ml<br>HSN: 3822.9090<br><a href="#">CAS No.: NA</a> NA M.W. We are pleased that you are interested in our range of high quality filtration products. In a new design, we present our filter papers, filter membranes and extraction thimbles for a broad range of applications as well as special products made from filter paper. Our catalogue "Filtration" also includes pH indicator papers, as well as test papers for qualitative and semi-quantitative analysis. This will give you an overview of the extensive range of applications for these products. Perhaps you may find a convenient solution to one of your analytical tasks. For more than 9 decades, since 1911, MACHEREY-NAGEL produces high quality filter papers, which represent the roots of the company. Even today, only the best raw materials are used in production, following long-proven recipes. This guarantees our continuous high quality. Since 1996, MN has established a quality management system in accordance with ISO 9001. We hope that you enjoy our catalogue and that our products will help to make your lab-life easier.

## Standard filter papers for qualitative analysis

Qualitative filter papers are manufactured from the same raw materials as the ashless grades and are particularly suited for general laboratory filtrations. The average ash content is about 0.1%, the amount of  $\alpha$ cellulose is about 95%.

### Technical data

| Grade                    | Properties                                | Particle retention( $\mu$ m) | Thickness | Filtration speed | Basis weight         |
|--------------------------|-------------------------------------------|------------------------------|-----------|------------------|----------------------|

## **MN618 = No-3**

MN 618 is a thick filter paper with medium flow rates and finer retention. It's higher loading capacity than thinner papers makes it especially useful for the filtration of large quantities of liquids.

| Cat NO.                | Diameter MM        | Pack size | HS code  | GST | Price (₹) |
|------------------------|--------------------|-----------|----------|-----|-----------|
| <a href="#">436009</a> | 90 MM CIRCLE.      | 100       | 48232000 | 18% | 1690      |

# Qualitative hardened filter papers - Wet-strengthened

## Filter papers for qualitative analysis

### Wet-strengthened filter papers

Hardened analytical filter papers are manufactured from refined pulp and linters and feature a content of  $\alpha$ cellulose of more than 95%. The smooth surface of these papers allows fibre-free filtration. They feature a high wet strength and can also be used in the filtration of strongly alkaline or strongly acidic solutions. Due to their high mechanical strength in wet condition they are particularly suited for applications, where the residue is removed from the filter e.g. with a spatula or a jet of water.

### Technical data

| Grade   | Properties                                       | Thickness | Filtration speed | Basis weight        |
|---------|--------------------------------------------------|-----------|------------------|---------------------|
| MN 1670 | wet-strengthened, fast filtration, smooth        | 0.13 mm   | 9 s              | 85 g/m <sup>2</sup> |
| MN 1672 | wet-strengthened, medium fast filtration, smooth | 0.13 mm   | 35 s             | 85 g/m <sup>2</sup> |
| MN 1674 | wet-strengthened, slow filtration, smooth        | 0.13 mm   | 110 s            | 85 g/m <sup>2</sup> |

### MN1674 = No-50

MN 1674 is a wet-strengthened dense filter paper with very high particle retention and slow flow rate. The smooth surface allows fiber-free filtration, even for highly acidic and basic media.

| Cat NO.                | Diameter MM    | Pack size | HS code  | GST | Price (₹) |
|------------------------|----------------|-----------|----------|-----|-----------|
| <a href="#">474011</a> | 110 MM CIRCLE. | 100       | 48232000 | 18% | 2590      |

# Ashless hardened filter papers - Wet-strengthened

## Wet-strengthened filter papers for quantitative analysis

These wet-strengthened hard filter papers are manufactured from refined pulp and linters and have a low ash content of < 0.01 %. They are often used for quantitative routine procedures and for analytical gravimetric applications. Due to their high mechanical strength in wet condition they are particularly suited for applications, where the residue is removed from the filter e.g. with a spatula or a jet of water.

### Technical data

| Grade      | Properties                                          | Thickness | Filtration speed | Basis weight         |
|------------|-----------------------------------------------------|-----------|------------------|----------------------|
| MN 1640 we | wet-strengthened, very fast filtration, smooth      | 0.22 mm   | 5 s              | 85 g/m <sup>2</sup>  |
| MN 1640 w  | wet-strengthened, fast filtration, smooth           | 0.2 mm    | 9 s              | 85 g/m <sup>2</sup>  |
| MN 1640 m  | wet-strengthened, medium fast filtration, smooth    | 0.2 mm    | 27 s             | 85 g/m <sup>2</sup>  |
| MN 1640 md | wet-strengthened, medium to slow filtration, smooth | 0.2 mm    | 55 s             | 85 g/m <sup>2</sup>  |
| MN 1640 d  | wet-strengthened, slow filtration, smooth           | 0.17 mm   | 140 s            | 85 g/m <sup>2</sup>  |
| MN 1640 de | wet-strengthened, very slow filtration, smooth      | 0.2 mm    | 195 s            | 100 g/m <sup>2</sup> |

## MN1640MD = NO 540

MN 1640 md is a wet strengthened, ashless filter paper, which is slightly more retentive than MN 1640 m with corresponding increase in filtration time. The smooth surface allows fiber-free filtration, even for highly acidic and basic media.

| Cat NO.                 | Diameter MM    | Pack size | HS code  | GST | Price (₹) |
|-------------------------|----------------|-----------|----------|-----|-----------|
| <a href="#">2240025</a> | 25 MM CIRCLE.  | 100       | 48232000 | 18% | POR       |
| <a href="#">224011</a>  | 110 MM CIRCLE. | 100       | 48232000 | 18% | 4190      |

## MN1640WE = No-541

MN 1640 we is the fastest, wet-strengthened, quantitative filter paper with highest flow rate. It is used for example in analytical procedures of samples with coarse or gelatinous particles. The smooth surface allows fiber-free filtration, even for highly acidic and basic media.

| Cat NO.                | Diameter MM    | Pack size | HS code  | GST | Price (₹) |
|------------------------|----------------|-----------|----------|-----|-----------|
| <a href="#">221011</a> | 110 MM CIRCLE. | 100       | 48232000 | 18% | 4190      |

## Filtering aids

Filter aids transform difficult precipitates and colloidal particles into a form which can be filtered more easily. When slimy and strongly lyophilic, swelling precipitates are involved, filter flocs prevent formation of a continuous, impermeable layer. A clogging of the filter is prevented.

## Glass fiber filters without binder

Glass microfiber filters without binder are used for difference weight analysis. They have a high thermal and chemical stability and are commonly used in determination of total suspended solids, or for gravimetric analysis of particles in air and hot fumes.

### **MNGF-1 = GF/A**

MN GF 1 is a binder-free glass fiber filter paper that offers fine particle retention, high flow rate and good loading capacity. It is used for high efficiency laboratory filtration as well as air sampling.

| Cat NO.                 | Diameter MM        | Pack size | HS code  | GST | Price (₹) |
|-------------------------|--------------------|-----------|----------|-----|-----------|
| <a href="#">4110025</a> | 25 MM CIRCLE.      | 100       | 70193900 | 18% | 3890      |

## Extraction thimbles standard quality made from cellulose

Extraction thimbles, made from cellulose, are available in five different types. MN 645 is standard grade for most applications, MN 645 D has a lid against floating of sample, MN 645 F is more dense and MN 645 W is less dense than the standard. MN 645 R is especially made for dust analysis.

### MN645

MN 645 extraction thimbles are the standard grade, made from pure cellulose.

## Extraction thimbles made from high purity glass fibres

Glass fiber extraction thimbles from MACHEREYINAGEL are made from pure borosilicate glass microfibers without addition of binders. They have a high particle retention and temperature resistance of 500 °C. Therefore, they are perfectly suited for dust analysis in hot exhaust gases.

### MN649

Glass fiber extraction thimbles MN 649 are made from glass microfibers without binder, short-term temperature resistance up to 500 °C, very high particle retention, for dust analysis in hot exhaust gases.

| Cat NO.                | Diameter MM                   | Pack size | HS code  | GST | Price (₹) |

## Membranes - PORAFIL membranes for microfiltration

A broad range of membranes for micro-filtration. PORAFIL membranes are available from different materials: cellulosebased and polymeric. They are suitable for microbiological applications, sample preparation, gravimetric analysis and solvent purification.

### PORAFIL MV

Membrane filters PORAFIL MV, Cellulose mixed ester, Fabric-reinforced, White membranes are reinforced with a polyester fabric. Their filtration properties are very similar to membranes PORAFIL CM, however, they are mechanically much more stable.

| Cat NO.                     | Diameter MM   | Pack size | HS code  | GST | Price (₹) |
|-----------------------------|---------------|-----------|----------|-----|-----------|
| <a href="#">65000020047</a> | 47 MM CIRCLE. | 100       | 39207990 | 18% | 12690     |
| <a href="#">65000045047</a> | 47 MM CIRCLE. | 100       | 39207990 | 18% | 12690     |

### PORAFIL CM with grid, Cellulose mixed ester

Membrane filters PORAFIL CM, cellulose mixed ester, white are ideal for gravimetric analysis. They are particularly suited for aqueous solutions. The hydrophilic membrane is thermally stable to 125 °C and can be autoclaved at 121 °C. This membrane is often used for contamination tests.

| Cat NO.                     | Diameter MM   | Pack size | HS code  | GST | Price (₹) |

| <a href="#">65300045047</a> | 47 MM CIRCLE. | 100       | 39207990 | 18% | 25390     |

## Filter products for electro plating

Electroplating baths used for galvanic processes are often cleaned with filter pumps. Usually, such filter pumps consist of 30–100 filter plates each equipped with one filter circle with an inner hole.

### MN728

Filter paper circles, MN 728, Activated charcoal, Slow (55 s), Smooth, MN 728 contains activated charcoal. It is particularly suited for decolorization of solutions. The activated charcoal is incorporated in the paper and cannot be washed out into the filtrate.

| Cat NO.                | Diameter MM    | Pack size | HS code  | GST | Price (₹) |
|------------------------|----------------|-----------|----------|-----|-----------|

## Chromatography paper

Paper chromatography requires high quality papers, since they have a considerable impact on the results of a separation. MACHEREY NAGEL chromatography papers are almost exclusively produced from pure linters without addition of other substances.

### **MN260**

MN 260 is a thin chromatography paper made from cotton-linters with good absorption and high capillary rise. It is also used for spot-tests.

| Cat NO.                   | Diameter MM         | Pack size | HS code  | GST | Price (₹) |
|---------------------------|---------------------|-----------|----------|-----|-----------|
| <a href="#">817260046</a> | 460 x 570 MM Sheets | 100       | 48054000 | 12% | 25590     |

### **MN261**

MN 261 is a thin chromatography paper made from cotton-linters with good absorption and good capillary rise.

| Cat NO.                       | Diameter MM         | Pack size | HS code  | GST | Price (₹) |
|-------------------------------|---------------------|-----------|----------|-----|-----------|
| <a href="#">40026100127.1</a> | 12.7 MM             | 100       | 48054000 | 12% | 1690      |
| <a href="#">817004A</a>       | 580 x 600 MM Sheets | 100       | 48054000 | 12% | 25890     |

### **MN866**

MN 866 is very thick and heavy chromatography paper with excellent absorption and very high capillary rise.

| Cat NO.                   | Diameter MM         | Pack size | HS code  | GST | Price (₹) |
|---------------------------|---------------------|-----------|----------|-----|-----------|
| <a href="#">817866021</a> | 190 x 190 MM Sheets | 100       | 48232000 | 18% | 31890     |

## Technical filter papers

MACHEREY NAGEL offers customers in the manufacturing and production industry a wide range of products. With the acquisition of the traditional Poerringer paper mill, this product range was once again significantly expanded. We offer special technical papers for very different applications. Whether thin, smooth papers for electroplating, large-format filter boards for the automotive and oil industries, or rolls for VENEMA filtration robots in the sugar beet industry, MACHEREY-NAGEL has the right product for every branch of industry. Our technical paper grades have been developed for special applications. For decades, they have been firmly anchored in many work specifications, as their constant filtration properties guarantee optimum results.

### MN180

MN 180 is a medium fast, medium wet-strength, hard, technical filter paper. It is commonly used for regeneration of transformer oils and electroplating baths.

| Cat NO.                 | Diameter MM         | Pack size | HS code  | GST | Price (₹) |
|-------------------------|---------------------|-----------|----------|-----|-----------|
| <a href="#">111080A</a> | 665 x 665 MM Sheets | 100       | 48054000 | 12% | 38690     |

### MN220

MN 220 is dyed black with a sulfur dye. It is used to identify small quantities of bright precipitates. For example, it is used for the detection of fluorine or silicon. Filter paper circles, MN 220, Black, Slow (45 s), Smooth

| Cat NO.                | Diameter MM    | Pack size | HS code  | GST | Price (₹) |
|------------------------|----------------|-----------|----------|-----|-----------|
| <a href="#">409012</a> | 125 MM CIRCLE. | 100       | 48232000 | 12% | 4390      |
| <a href="#">409011</a> | 110 MM CIRCLE. | 100       | 48232000 | 12% | 3690      |

## MN321

MN 321 is a nitrogen-free, fast filter paper. It is often used for malt analysis in breweries. Filter paper circles, MN 321, Nitrogen-free, Fast (5 s), Smooth

| Cat NO.                | Diameter MM    | Pack size | HS code  | GST | Price (₹) |
|------------------------|----------------|-----------|----------|-----|-----------|
| <a href="#">410032</a> | 320 MM CIRCLE. | 100       | 48232000 | 18% | POR       |

## MN710

| Cat NO. | Diameter MM         | Pack size | HS code  | GST | Price (₹) |
|---------|---------------------|-----------|----------|-----|-----------|
| 150010  | 580 x 580 MM Sheets | 100       | 48054000 | 12% | 6390      |

## MN713

MN 713 is a medium fast, technical all-round filter paper. It used in filtration of e.g. alcohols, syrups, lacquers, spirits and for covering of bench tops and cupboards. Filter paper sheets MN 713, Technical, Medium fast (20 s), Smooth

| Cat NO.                | Diameter MM         | Pack size | HS code  | GST | Price (₹) |
|------------------------|---------------------|-----------|----------|-----|-----------|
| <a href="#">152020</a> | 450 x 450 MM Sheets | 100       | 48054000 | 12% | POR       |
| <a href="#">152010</a> | 580 x 580 MM Sheets | 100       | 48054000 | 12% | POR       |

## MN604

MN 604 is a thick and fast technical filter paper. It find application in beverage industry e.g. for the filtration of fruit juices or wine. Filter paper sheets MN 604, Technical, Fast (11 s), Smooth

| Cat NO.                 | Diameter MM         | Pack size | HS code  | GST | Price (₹) |
|-------------------------|---------------------|-----------|----------|-----|-----------|
| <a href="#">122010A</a> | 580 x 580 MM Sheets | 100       | 48054000 | 12% | 36290     |

## MN675

MN 675 is a slow, firm technical filter paper which is used for filtration of large volumes of liquids. Filter paper sheets MN 675, Technical, Slow (60 s), Smooth

| Cat NO.                | Diameter MM         | Pack size | HS code  | GST | Price (₹) |
|------------------------|---------------------|-----------|----------|-----|-----------|
| <a href="#">148010</a> | 580 x 580 MM Sheets | 100       | 48054000 | 12% | POR       |

## MN918

MN 918 is a fast, technical filter paper for filtration of large volumes of liquids e.g. essences and extracts. Filter paper circles, MN 918, Technical, Fast (9 s), Smooth

| Cat NO.                | Diameter MM    | Pack size | HS code  | GST | Price (₹) |
|------------------------|----------------|-----------|----------|-----|-----------|
| <a href="#">461007</a> | 70 MM CIRCLE.  | 100       | 48232000 | 18% | 1190      |
| <a href="#">461009</a> | 90 MM CIRCLE.  | 100       | 48232000 | 18% | 1390      |
| <a href="#">461011</a> | 110 MM CIRCLE. | 100       | 48232000 | 18% | 1790      |

## MN804

MN 804 is a very fast, soft technical filter paper, which is used in beverage industry. Filter paper sheets MN 804, Technical, Very fast (5 s), Smooth

| Cat NO.                   | Diameter MM    | Pack size | HS code  | GST | Price (₹) |
|---------------------------|----------------|-----------|----------|-----|-----------|
| <a href="#">400804007</a> | 70 MM CIRCLE.  | 100       | 48054000 | 12% | POR       |
| <a href="#">400804011</a> | 110 MM CIRCLE. | 100       | 48054000 | 12% | POR       |

## MN818

MN 818 is a highly-absorptive, fast filter paper. It is used for technical filtration and spot-tests e.g. Guthrie tests (for non-medical applications only). Filter paper sheets MN 818, Strongly-absorbent, Fast (8 s), Smooth

| Cat NO.                 | Diameter MM         | Pack size | HS code  | GST | Price (₹) |
|-------------------------|---------------------|-----------|----------|-----|-----------|
| <a href="#">156050A</a> | 500 x 500 MM Sheets | 100       | 48054000 | 12% | 32490     |

## MN605

MN 605 is a very fast, crepped paper for technical filtration. It is used in filtration of essential oils, paint or gelatin.

| Cat NO.                | Diameter MM    | Pack size | HS code  | GST | Price (₹) |
|------------------------|----------------|-----------|----------|-----|-----------|
| <a href="#">523024</a> | 240 MM CIRCLE. | 100       | 48232000 | 18% | 8990      |

## MN619G

MN 619 G is a slow, phosphate-free filter paper which is made especially for soil analysis.

| Cat NO.                | Diameter MM   | Pack size | HS code  | GST | Price (₹) |
|------------------------|---------------|-----------|----------|-----|-----------|
| <a href="#">440005</a> | 55 MM CIRCLE. | 100       | 48232000 | 18% | 890       |

## MN625

MN 625 is a medium fast, technical filter paper for general applications.

| Cat NO.                | Diameter MM   | Pack size | HS code  | GST | Price (₹) |
|------------------------|---------------|-----------|----------|-----|-----------|
| <a href="#">443005</a> | 55 MM CIRCLE. | 100       | 48232000 | 18% | 1090      |

## MN651/120

Filter Paper Sheets MN 651/120 crepped parallel to long side-

| Cat NO.        | Diameter MM         | Pack size | HS code  | GST | Price (₹) |
|----------------|---------------------|-----------|----------|-----|-----------|
| 400651/120/106 | 180 x 580 MM Sheets | 100       | 48232000 | 18% | 25790     |

## Lens paper

MN 13 is a thin, soft, non-fluffing tissue paper for cleaning optical glasses, lenses and cuvettes. It is also suitable as protective paper for metallographic sections.

### **MN13**

MN 13 (José or Joseph paper) is a thin, soft, non-fluffing tissue paper for cleaning optical glasses or cuvettes. It is also suitable as protective paper for metallographic sections.

| Cat NO.                | Diameter MM         | Pack size | HS code  | GST | Price (₹) |
|------------------------|---------------------|-----------|----------|-----|-----------|
| <a href="#">118000</a> | 80 x 100 MM Sheets  | 50        | 48232000 | 18% | 910       |
| <a href="#">418101</a> | 120 x 120 MM Sheets | 500       | 48232000 | 18% | 3890      |

### **MN224**

Microscopy paper MN 224, is a paper with good absorbent properties for absorbing liquids from microscopic preparations.

| Cat NO.                | Diameter MM        | Pack size | HS code  | GST | Price (₹) |
|------------------------|--------------------|-----------|----------|-----|-----------|
| <a href="#">185000</a> | 37 x 100 MM Sheets | 50        | 48232000 | 18% | 4890      |

## Phase separation paper

MACHEREY NAGEL phase separation papers are made hydrophobic (impermeable to water) by impregnation with a silicone oil. With the aid of these filters, water can be separated from water-immiscible organic solvents in an elegant manner, by means of a simple filtration.

### **MN616WA**

MN 616 WA is made hydrophobic (impermeable to water) by impregnation with a silicone. With these filters, water can be separated from water-immiscible organic solvents by a simple filtration.

| Cat NO.                | Diameter MM    | Pack size | HS code  | GST | Price (₹) |
|------------------------|----------------|-----------|----------|-----|-----------|
| <a href="#">483012</a> | 125 MM CIRCLE. | 100       | 48232000 | 18% | 2090      |
| <a href="#">484011</a> | 110 MM CIRCLE. | 100       | 48232000 | 18% | 2790      |
| <a href="#">484015</a> | 150 MM CIRCLE. | 100       | 48232000 | 18% | 5190      |

### **MN617WA**

MN 617 WA is made hydrophobic (impermeable to water) by impregnation with a silicone. With the aid of these filters, water can be separated from water-immiscible organic solvents by a simple filtration.

| Cat NO.                | Diameter MM    | Pack size | HS code  | GST | Price (₹) |
|------------------------|----------------|-----------|----------|-----|-----------|
| <a href="#">430012</a> | 125 MM CIRCLE. | 100       | 48232000 | 18% | 3790      |

## Weighing aids

Weighing boats MN 808 from special, nitrogen-free parchment are used to weigh viscous or syrupy samples. Weighing paper MN 226 is transparent and smooth, which guarantees that weighed goods are transferred without loss. MN 40/25 are easily crushable parchment papers which are mainly used for syrupy and semi-crystalline samples.

### [MN808](#)

Weighing boats MN 808 are made from a special, nitrogen-free parchment. They are used to weigh viscous or syrupy substances.

| Cat NO.                | Diameter MM            | Pack size | HS code  | GST | Price (₹) |
|------------------------|------------------------|-----------|----------|-----|-----------|
| <a href="#">486000</a> | 58 x 10 x 10 MM Sheets | 100       | 48061000 | 12% | 14890     |

### [MN226](#)

MN 226 is a transparent paper, smooth on both sides, which can be used as substitute for weighing boats. The smooth surface of the paper guarantees that the weighed goods can be transferred without loss

| Cat NO.                | Diameter MM        | Pack size | HS code  | GST | Price (₹) |
|------------------------|--------------------|-----------|----------|-----|-----------|
| <a href="#">186002</a> | 90 x 115 MM Sheets | 100       | 48064010 | 12% | 1690      |

### [MN40/25](#)

MN 40/25 sheets are easily crushable (not wet-strengthened) parchment papers, which are mainly used in the sugar industry for weighing syrupy and semi-crystalline substances.

| Cat NO.                | Diameter MM         | Pack size | HS code  | GST | Price (₹) |
|------------------------|---------------------|-----------|----------|-----|-----------|
| <a href="#">194000</a> | 100 x 100 MM Sheets | 100       | 48061000 | 12% | 3990      |

## Surface protection paper

This filter paper is coated on one side with polyethylene, e.g. for covering laboratory workbenches. The filter paper absorbs spilt liquids. It is especially suited for isotope and bacteriological laboratories as well as for chemical storerooms and cupboards.

### **MN210PE**

MN 210 PE is coated on one side with polyethylene, e.g. for covering laboratory workbenches. The filter paper absorbs spilt liquids. It is especially suited for isotope and bacteriological laboratories as well as for chemical storerooms and cupboards.

| Cat NO.                  | Diameter MM         | Pack size | HS code  | GST | Price (₹) |
|--------------------------|---------------------|-----------|----------|-----|-----------|
| <a href="#">112000.1</a> | 480 x 600 MM Sheets | 50        | 48054000 | 12% | 15390     |
| <a href="#">112000A</a>  | 480 x 600 MM Sheets | 100       | 48054000 | 12% | 25590     |

# Chromatography

We provide optimal and reliable solutions for your laboratory work in sample preparation, method development and routine analysis.

## Standard silica layers for TLC

Glass plates

ALUGRAM® Xtra aluminum sheets  
ALUGRAM® aluminum sheets

POLYGRAM® polyester sheets

Standard filter papers for qualitative analysis are manufactured from the same raw materials as the ashless grades and are particularly suited for general laboratory filtrations. The average ash content is about 0.1%, the amount of a cellulose is about 95%.

## ADAMANT - unmodified standard silica layers

### ADAMANT unmodified standard silica layers

#### ★ Key features

- Outstanding hardness and abrasion resistance due to an optimized binder system
- Increased separation efficiency due to an optimized particle size distribution
- High suitability for trace analysis resulting from a UV indicator with increased brilliance and a lownoise background of the layer

#### 🔧 Technical characteristics

- Silica 60, mean pore size 60 Å, specific surface (BET) ~ 500 m<sup>2</sup>/g, specific pore volume 0.75 mL/g, particle size 5–17 µm

TLC glass plates, silica gel layer, ADAMANT, Layer thickness: 250 µm, TLC glass plates in different plate sizes for many different applications. The ADAMANT is the hardest TLC ready-to-use layer from MACHEREY-NAGEL. Unmodified silica gel (SiOH) with an extra binder system for outstanding abrasion resistance. Available as glass plates with or without fluorescent indicator.

## ALUGRAM Xtra SIL G - unmodified standard silica layers on aluminium

### ALUGRAM® Xtra SIL G Ax unmodified standard silica layers on aluminum

#### ★ Key features

- Outstanding wettability for precise colorization results, even with 100 % aqueous detection reagents
- Excellent separation efficiency and reproducibility from lot to lot
- Easy and reliable cutting due to an optimized binder system, no flaking of silica

#### 📌 Technical characteristics

- Silica 60, mean pore size 60 Å, specific surface (BET) ~ 500 m<sup>2</sup>/g, specific pore volume 0.75 mL/g, particle size 5–17 µm
- Binder: highly polymeric product, which is stable in almost all organic solvents and resistant towards aggressive visualization reagents, also completely stable in purely aqueous eluents

Silica 60, mean pore size 60 Å, specific pore volume 0.75 mL/g, particle size 5–17 µm Indicator: manganese activated zinc silicate with green fluorescence for short-wave UV (254 nm); special inorganic fluorescent pigment with blue fluorescence for long-wave UV (366 nm) Binder: highly polymeric product, which is stable in almost all organic solvents and resistant towards aggressive visualization reagents; binder system for ALUGRAM® Xtra is also completely stable in purely aqueous eluents.

## SIL G - unmodified standard silica layers

### SIL G G P A unmodified standard silica layers

#### Technical characteristics

- Silica 60, mean pore size 60 Å, specific surface (BET) ~ 500 m<sup>2</sup>/g, specific pore volume 0.75 mL/g, particle size 5–17 µm
- Thickness of layer for analytical plates 0.25 mm, for preparative plates 0.5 and 1 mm; for 2 mm preparative layers a slightly coarser material is used
- Indicators: manganese activated zinc silicate with green fluorescence for short-wave UV (254 nm); special inorganic fluorescent pigment with blue fluorescence for long-wave UV (366 nm)
- Binders: highly polymeric products, which are stable in almost all organic solvents and resistant towards aggressive visualization reagents; binder system for POLYGRAM® sheets is also completely stable in purely aqueous eluents

TLC polyester sheets, silica gel layer, POLYGRAM SIL G, (SiOH).

## Alox aluminum oxide layers

### Alox G P A aluminum oxide layers

#### Technical characteristics

- Aluminum oxide, mean pore size 60 Å, specific surface (BET) ~ 200 m<sup>2</sup>/g
- Inert organic binder
- Indicator: manganese-activated zinc silicate

#### Recommended application

- Terpenes, alkaloids, steroids, aliphatic and aromatic compounds
- We recommend to activate aluminum oxide layers before use by heating 10 minutes at 120 °C

| Cat NO.                | Type                                | Diameter MM | Pack size | HS code  | GST | Price (₹) |

## Cellulose MN 300 native fibrous cellulose layers

### Cellulose MN 300 G P A native fibrous cellulose layers

#### Technical characteristics

- Fiber length (95 %) 2–20 µm, average degree of polymerization 400–500, specific surface acc. to Blaine 15 000 cm<sup>2</sup>/g, ≤ 20 ppm Fe, 6 ppm Cu, 7 ppm P; CH<sub>2</sub>Cl<sub>2</sub>- extract ≤ 0.25 %; residue on ignition at 850 °C ≤ 1500 ppm

#### Recommended application

- Partition chromatography of polar substances such as amino acids, carboxylic acids or carbohydrates

TLC polyester sheets, cellulose layer, POLYGRAM CEL 300, TLC polyester sheets with native fibrous cellulose.

| Cat NO.                | Type                                      | Diameter MM | Pack size | HS code  | GST | Price (₹) |

## Cellulose MN 300 PEI PEI-impregnated cellulose ion exchange layers

### Cellulose MN 300 PEI P PEI-impregnated cellulose ion exchange layers

#### Technical characteristics

- Fibrous cellulose impregnated with polyethyleneimine

#### Recommended application

- Analysis of nucleic acids, and of mutagenic substances with the <sup>32</sup>P postlabelling procedure

TLC polyester sheets with fibrous cellulose impregnated with polyethyleneimine (PEI).

| Cat NO.                | Type                                 | Diameter MM | Pack size | HS code  | GST | Price (₹) |

## Cellulose MN 400 (AVICEL®) microcrystalline cellulose layers

### Cellulose MN 400 (AVICEL®) microcrystalline cellulose layers

#### Technical characteristics

- Prepared by hydrolysis of high purity cellulose with HCl, average degree of polymerization 40–200

#### Recommended application

- Carboxylic acids, lower alcohols, urea and purine derivatives

Cellulose MN 400 (AVICEL®) are microcrystalline cellulose layers for TLC. Prepared by hydrolysis of high purity cellulose with HCl; mean degree of polymerization 40–200. Available as glass plates and POLYGRAM polyester sheets.

| Cat NO.                | Type                            | Diameter MM | Pack size | HS code  | GST | Price (₹) |

## CHIRALPLATE special layer enantiomer separation

### CHIRALPLATE special layer enantiomer separation

#### Technical characteristics

- Reversed phase nano silica impregnated with Cu<sup>2+</sup> ions and a chiral selector (proline derivative)
- Separation based on ligand exchange, i.e. formation of ternary mixed-ligand complexes with the Cu(II) ions, differences in the stability of the diastereomeric complexes cause chromatographic separation

#### Recommended application

- Enantiomer separation of amino acids, *N*-methylamino acids, *N*-formylamino acids,  $\alpha$ -alkylamino acids, thiazolidine derivatives, dipeptides, lactones,  $\alpha$ -hydroxycarboxylic acids

CHIRALPLATE - Special layer for TLC enantiomer separation. Separation based on ligand exchange, i. e. formation of ternary mixed-ligand complexes with Cu(II) ions. Differences in the stability of the diastereomeric complexes cause chromatographic separation. Available as glass plates with fluorescent indicator. A review on the application of CHIRALPLATE has been given by K. Günther [J. Chromatogr. 448 (1988) 11–30].

| Cat NO.                | Type                                | Diameter MM | Pack size | HS code  | GST | Price (₹) |

## DURASIL unmodified standard silica layers

### DURASIL unmodified standard silica layers

#### Technical characteristics

- Silica 60, mean pore size 60 Å, specific surface (BET) ~ 500 m<sup>2</sup>/g, specific pore volume 0.75 mL/g, particle size 5–17 µm
- Hard, water-resistant and wettable layers due to a special binder system

TLC glass plates in different plate sizes for many different applications. Coated with unmodified silica gel (SiOH). Hard layer that shows other results than SIL G, ADAMANT or SIL HD layers. It is often used for TCM applications.

| Cat NO.                | Type                               | Diameter MM | Pack size | HS code  | GST | Price (₹) |

| <a href="#">812003</a> | TLC precoated plates<br>DURASIL-25 | 10 x 20     | 50        | 38220090 | 12% | 33190     |

## Mixed layers for TLC

### Mixed layers for TLC

#### Alox/CEL-AC-Mix-25:

- Mixed layer of aluminum oxide G and acetylated cellulose, recommended for separation of PAH

#### SILCEL-Mix-25:

- Mixed layer of cellulose and silica, recommended for separation of preservatives and other antimicrobial compounds

TLC glass plates in different plate sizes for many different applications. SILCEL-Mix is a mixed layer of cellulose and silica gel.

| Cat NO.                | Type                                            | Diameter MM | Pack size | HS code  | GST | Price (₹) |

## Polyamid-6 ε-polycaprolactame layers

### Polyamid-6 ε-polycaprolactame layers

#### Technical characteristics

- Polyamide 6 = nylon 6 = perlon = ε-aminopolycaprolactame
- Separation mechanism based on hydrogen bonds to amide groups of the polymer matrix as well as on ionic, dipole and electron donor-acceptor interactions

#### Recommended application

- Natural compounds, phenols, carboxylic acids, aromatic nitro compounds and especially amino acids

TLC polyester sheets with polyamide 6 (PA6, ε-polycaprolactame).

| Cat NO.                | Type                                    | Diameter MM | Pack size | HS code  | GST | Price (₹) |
|------------------------|-----------------------------------------|-------------|-----------|----------|-----|-----------|
| <a href="#">803023</a> | POLYGRAM sheets<br>POLYAMIDE-6<br>UV254 | 20 x 20     | 25        | 38220090 | 12% | 36090     |

## RP-18 W/UV254 octadecyl-modified HPTLC silica layers

### RP-18 W/UV<sub>254</sub> octadecyl-modified HPTLC silica layers

#### Technical characteristics

- Nano silica 60, mean pore size 60 Å, specific surface (BET) ~ 500 m<sup>2</sup>/g, specific pore volume 0.75 mL/g, particle size 2–10 µm, for preparative plates (1 mm thickness of layer) standard silica 60, pH stability 2–10, particle size 5–17 µm
- Indicator: acid-resistant product with a pale blue fluorescence for short-wave UV (254 nm), UV-absorbing substances appear as dark-blue to black spots on a light-blue background

#### Modification

- Partial octadecyl (C<sub>18</sub>) modification, wettable with water, carbon content 14 %
- Order of polarity:  
silica > DIOL > NH<sub>2</sub> > CN > RP-2 > C18-50 > RP-18 W > C18-100

#### Recommended application

- NP or RP separation with eluents from anhydrous solvents to mixtures with high concentrations of water (see table and figure on previous page), relative polarity of the eluent determines the polarity of the layer
- Aminophenols, barbiturates, preservatives, nucleobases, polycyclic aromatic hydrocarbons, steroids, tetracyclines, plasticizers (phthalates)

HPTLC aluminum sheets with octadecyl (C18, ODS, RP18) modified silica gel. RP-18 W is wettable with water.

## SIL G-25 HR special layer for aflatoxin separation

### SIL G-25 HR special layer for aflatoxin separation

#### Technical characteristics

- High purity silica 60 with gypsum and a very small quantity of a polymeric organic binder; softer than the standard silica layer, i.e. spots can be scratched and the layer absorbs faster

#### Recommended application

- Aflatoxins

TLC glass plates in different plate sizes for many different applications, coated with unmodified high purity silica gel (SiOH).

| Cat NO.                | Type                                       | Diameter MM | Pack size | HS code  | GST | Price (₹) |

## SIL N-HR unmodified standard silica layers

### SIL N-HR unmodified standard silica layers

#### Technical characteristics

- High purity silica 60, mean pore size 60 Å, specific surface (BET) ~ 500 m<sup>2</sup>/g, specific pore volume 0.75 mL/g, particle size 5–17 µm, different binder system compared to SIL G results in different separation characteristics

- A special feature of the POLYGRAM® SIL N-HR is a higher gypsum content

TLC polyester sheets with unmodified high purity silica gel (SiOH). Higher gypsum content and different binder system compared to SIL G results in different separation characteristics.

| Cat NO.                | Type                              | Diameter MM | Pack size | HS code  | GST | Price (₹) |

## TLC / HPTLC plates and sheets

### Nano-ADAMANT unmodified HPTLC silica layers

#### ★ Key features

- Outstanding hardness and abrasion resistance due to an optimized binder system
- Increased separation efficiency due to an optimized particle size distribution
- High suitability for trace analyses resulting from a UV indicator with increased brilliance and a lownoise background of the layer

#### 🔧 Technical characteristics

- Nano silica 60, mean pore size 60 Å, specific surface (BET) ~ 500 m<sup>2</sup>/g, specific pore volume 0.75 mL/g, particle size 2–10 µm

Use our TLC and HPTLC glass plates, aluminum and polyester sheets for your rapid and inexpensive thin layer chromatography methods. We offer various reliable coatings for normal phase and reversed phase. We also gladly offer you samples to test the right product for your applications in advance.

## Nano-ADAMANT unmodified HPTLC silica layers

## Nano-SIL C18, octadecyl-modified HPTLC silica layers

### Nano-SIL C18 octadecyl-modified HPTLC silica layers

#### Technical characteristics

- Nano silica 60, mean pore size 60 Å, specific surface (BET) ~ 500 m<sup>2</sup>/g, specific pore volume 0.75 mL/g, pH stability 2–10, particle size 2–10 µm
- Indicator: acid-resistant product with a pale blue fluorescence for short-wave UV (254 nm), UV-absorbing substances appear as dark-blue to black spots on a light-blue background

#### Modification

- Partial (50 %) or complete (100 %) octadecyl modification, carbon content 7.5 and 14 %, respectively
- Order of polarity:  
silica > DIOL > NH<sub>2</sub> > CN > RP-2 > C18-50 > RP-18 W > C18-100

#### Recommended application

- Reversed phase separation mode with eluents from anhydrous solvents to mixtures with high concentrations of water (see table and figure below)
- Alkaloids, amino acids, preservatives, optical brighteners, barbiturates, polycyclic aromatic hydrocarbons (PAH), drugs, peptides, flavonoids, phenols, indole derivatives, steroids

HPTLC glass plates in different plate sizes for many different applications. Silica gel with octadecyl (C18, ODS, RP18) modification. Carbon content: approx. 14 %.

| Cat NO.                | Type                                                        | Diameter MM | Pack size | HS code  | GST | Price (₹) |

## TLC adsorbents and accessories

If you would like to coat TLC plates yourself, we offer suitable adsorbents for thin layer chromatography. In addition to our ready-to-use layers in TLC and HPTLC, the product range also includes accessories.

### Accessories for TLC

## Vials and caps for analysis and for sample storage

Our portfolio contains autosampler vials and caps for HPLC and GC for all common instrument manufacturers, such as Waters, Agilent, Shimadzu and others. It is completed by lab accessories, like vial containers and racks or crimpers / decappers. Storage vials for liquid or powdery samples are available as well.

### Crimp neck vials and caps N 20

Our autosampler vials are made from 1st hydrolytic class glass under strict hygienic conditions. Find your vial of interest by filtering our delivery program by parameters like volume, dimensions, material (clear / amber glass, plastic), vial type (screw, crimp, snap, etc.) and other selection criteria.

## Closures, caps and septa

Ready assembled or bonded closures with septa of high analytical purity are offered in different cap types (crimp / screw / snap) and sizes. You can choose between various liner materials with different physical and chemical properties.

## Sample filtration

---

CHROMAFIL filtration products avoid contamination of sensitive instrumentation and increase the lifetime of columns and equipment. We offer different membranes (e.g., PTFE, RC, nylon) in syringe filters, filter cartridges and filter 96well plates for rapid purification and removal of particles.

## CHROMAFIL - Syringe filters

CHROMAFIL and CHROMAFIL Xtra syringe filters increase the lifetime of columns and equipment by removal of solid particles. Different membranes (e.g., PTFE, RC, nylon) and pore sizes are used for rapid purification of your samples.

### CHROMAFIL Xtra PA membrane material : polyamide (Nylon)

- Moderately hydrophilic membrane
- For aqueous and organic / aqueous medium polar liquids
- PA filters with integrated glass fiber prefilter\* (GF / PA) are recommended for solutions with a high load of particulate matter or for highly viscous solutions

Syringe filters, labeled, CHROMAFIL Xtra PA, Inside the syringe filter polyamide is used as membrane material. The rather hydrophilic PA membrane is suitable for filtration of medium polar organic-aqueous liquids.

| Cat NO.                | Type     | Pore size | Membrane | Pack size | HS code  | GST | Price (₹) |
|------------------------|----------|-----------|----------|-----------|----------|-----|-----------|

| <a href="#">729049</a> | AO-45/15 MS | 0.45 µm   | 15 mm    | 100       | 84212900 | 18% | 17590     |

## CHROMAFIL Xtra PTFE membrane material: polytetrafluoroethylene

- Hydrophobic membrane
- For nonpolar liquids and gases
- Very resistant to all kinds of solvents as well as acids and bases; flushing with alcohol, followed by water, makes the originally hydrophobic membrane more hydrophilic
- PTFE filters with integrated glass fiber prefilter\* (GF / PTFE) are recommended for solutions with a high load of particulate matter or for highly viscous solutions

Syringe filters, labeled, CHROMAFIL Xtra PTFE, Inside the syringe filter polytetrafluoroethylene is used as membrane material. The hydrophobic PTFE membrane is very resistant towards all kinds of solvents as well as acids and bases. Flushing with alcohol, followed by water, makes the originally hydrophobic membrane more hydrophilic.

| Cat NO.                | Type       | Pore size | Membrane | Pack size | HS code  | GST | Price (₹) |

## CHROMAFIL Xtra MV membrane material: cellulose mixed esters

### Cellulose mixed ester (MV)

- Hydrophilic membrane with very low adsorption
- For aqueous or polar solutions

Syringe filters, labeled, CHROMAFIL Xtra MV, Inside the syringe filter a cellulose mixed ester is used as membrane material. The hydrophilic MV membrane is suitable for aqueous or polar solutions.

| Cat NO.                | Type     | Pore size | Membrane | Pack size | HS code  | GST | Price (₹) |
|------------------------|----------|-----------|----------|-----------|----------|-----|-----------|
| <a href="#">729204</a> | MV-45/25 | 0.45 µm   | 25 mm    | 100       | 84212900 | 18% | 17590     |

## CHROMAFIL Xtra PET membrane material: polyester

Syringe filters, color coded, CHROMAFIL PET, Inside the syringe filter polyester (polyethylene terephthalate) is used as membrane material. The hydrophilic multipurpose PET membrane is for polar as well as nonpolar solvents. It is the HPLC filter, especially suited for mixtures of water and organic solvents. It is not cytotoxic, does not inhibit the growth of microorganisms and higher cells. All CHROMAFIL filters are autoclavable (121 °C and 1.1 bar for 30 min)!

| Cat NO.                    | Type      | Pore size | Membrane | Pack size | HS code  | GST | Price (₹) |

## CHROMAFIL Xtra CA membrane material: cellulose acetate

- Hydrophilic membrane
- For the filtration of water-soluble oligomers and polymers, especially suited for biological macromolecules
- Very high stability in aqueous solutions
- Binding capacity for proteins 21 µg per 25 mm filter
- Also available in a sterile package (S) for filtration under sterile conditions (each filter individually sealed)

Inside the syringe filter polyester (polyethylene terephthalate) is used as membrane material. The hydrophilic multipurpose PET membrane is suitable for polar as well as nonpolar solvents. It is the HPLC filter, especially suited for mixtures of water and organic solvents. It is not cytotoxic, does not inhibit the growth of microorganisms and higher cells. Labeled for method validation and certification. All CHROMAFIL filters are autoclavable (121 °C and 1.1 bar for 30 min)!

| Cat NO.                | Type     | Pore size | Membrane | Pack size | HS code  | GST | Price (₹) |
|------------------------|----------|-----------|----------|-----------|----------|-----|-----------|
| <a href="#">729226</a> | CA-20/25 | 0.20 µm   | 25 mm    | 100       | 84212900 | 18% | 17590     |
| <a href="#">729227</a> | CA-45/25 | 0.45 µm   | 25 mm    | 100       | 84212900 | 18% | 17590     |

## CHROMAFIL Sterile filters CA membrane material: cellulose acetate

Syringe filters, sterile, CHROMAFIL CA, Inside the syringe filter cellulose acetate is used as membrane material. The hydrophilic CA membrane is suitable for filtration of water-soluble oligomers and polymers, especially suited for biological macromolecules with very high shape stability in aqueous solutions. Extremely low binding capacity for proteins. In a sterile package (S) for filtration under sterile conditions (each filter is color coded and individually sealed). All CHROMAFIL filters are autoclavable (121 °C and 1.1 bar for 30 min)!

| Cat NO.                | Type         | Pore size | Membrane | Pack size | HS code  | GST | Price (₹) |
|------------------------|--------------|-----------|----------|-----------|----------|-----|-----------|
| <a href="#">729024</a> | CA-20/25 (S) | 0.20 µm   | 25 mm    | 50        | 84212900 | 18% | 13690     |
| <a href="#">729025</a> | CA-45/25 (S) | 0.45 µm   | 25 mm    | 50        | 84212900 | 18% | 13690     |

## CHROMAFIL Xtra PES membrane material: polyether sulfone

- Hydrophilic membrane
- For aqueous and slightly organic liquids with higher flow rates
- Very low adsorption for pharmaceuticals and proteins
- Good stability against organic acids and bases
- Binding capacity for proteins 29 µg per 25 mm filter

Syringe filters, CHROMAFIL Xtra PES, Inside the syringe filter polyethersulfone is used as membrane material. The hydrophilic PES membrane is suitable for aqueous and slightly organic liquids. This filter shows a good stability against acids and bases as well as a very low adsorption for pharmaceuticals and proteins. Labeled for method validation and certification. All CHROMAFIL filters are autoclavable (121 °C and 1.1 bar for 30 min)!

| Cat NO.                | Type       | Pore size | Membrane | Pack size | HS code  | GST | Price (₹) |
|------------------------|------------|-----------|----------|-----------|----------|-----|-----------|
| <a href="#">729240</a> | PES-20/25  | 0.20 µm   | 25 mm    | 100       | 84212900 | 18% | 17590     |
| <a href="#">729241</a> | PES-45/25  | 0.45 µm   | 25 mm    | 100       | 84212900 | 18% | 17590     |
| <a href="#">729242</a> | PES-500/25 | 5.0 µm    | 25 mm    | 100       | 84212900 | 18% | 17590     |

## CHROMAFIL Xtra GF membrane material: glass fibre

### Glass fiber (GF)

- Inert filter, nominal pore size 1 µm, allows higher flow rates than small pore filters
- For solutions with high loads of particulate matter or for highly viscous solutions (e.g. soil samples, fermentation broths)
- As prefilters for other CHROMAFIL® filters, they prevent the clogging of the membrane
- High binding capacity for proteins

Syringe filters, color coded, CHROMAFIL GF, Inside the syringe filter a glass fiber is used as membrane material. The hydrophilic GF membrane is a inert filter for solutions with high loads of particulate matter or for highly viscous solutions (e.g., soil samples, fermentation broths). The nominal pore size of 1 µm allows higher flow rates than small pore filters. Membrane material is also used as prefilter for CHROMAFIL combi filters, they prevent plugging of the main membrane. All CHROMAFIL filters are autoclavable (121 °C and 1.1 bar for 30 min)!

| Cat NO.                | Type      | Pore size | Membrane | Pack size | HS code  | GST | Price (₹) |
|------------------------|-----------|-----------|----------|-----------|----------|-----|-----------|
| <a href="#">729028</a> | GF-100/25 | 1 µm      | 25 mm    | 100       | 84212900 | 18% | 17590     |
| <a href="#">729228</a> | GF-100/25 | 1 µm      | 25 mm    | 100       | 84212900 | 18% | 17590     |

## CHROMAFIL Xtra PVDF membrane material: polyvinylidene difluoride

### Polyvinylidene difluoride (PVDF)

- Hydrophilic membrane
- For 100 % aqueous solutions, water-soluble oligomers and polymers like proteins
- Low binding capacity for proteins 20 µg per 25 mm filter
- PVDF filters with integrated glass fiber prefilter\* (GF / PVDF) are recommended for the filtration of biological samples with high particle loads

Syringe filters, CHROMAFIL Xtra PVDF, Inside the syringe filter polyvinylidene difluoride is used as membrane material. The hydrophilic PVDF membrane is suitable for filtration of 100 % aqueous samples, water-soluble oligomers and polymers like proteins. Extremely low binding capacity for proteins. Labeled for method validation and certification. All CHROMAFIL filters are autoclavable (121 °C and 1.1 bar for 30 min)!

| Cat NO.                | Type       | Pore size | Membrane | Pack size | HS code  | GST | Price (₹) |
|------------------------|------------|-----------|----------|-----------|----------|-----|-----------|
| <a href="#">729218</a> | PVDF-20/25 | 0.20 µm   | 25 mm    | 100       | 84212900 | 18% | 17590     |
| <a href="#">729219</a> | PVDF-45/25 | 0.45 µm   | 25 mm    | 100       | 84212900 | 18% | 17590     |
| <a href="#">729244</a> | PVDF-45/13 | 0.45 µm   | 13 mm    | 100       | 84212900 | 18% | 17590     |

## CHROMAFIL PVDF membrane material: glass fibre/polyvinylidene difluoride

Syringe filters (combi), CHROMAFIL GF / PVDF, Combi syringe filters are recommended for solutions with a high load of particulate matter or for highly viscous solutions. These products combine a coarse glass fiber prefilter and a small-pore polyvinylidene difluoride membrane as main filter. The hydrophilic PVDF membrane is for 100 % aqueous samples, water-soluble oligomers and polymers like proteins. All CHROMAFIL filters are autoclavable (121 °C and 1.1 bar for 30 min)!

| Cat NO.                | Type          | Pore size   | Membrane | Pack size | HS code  | GST | Price (₹) |
|------------------------|---------------|-------------|----------|-----------|----------|-----|-----------|
| <a href="#">729039</a> | GF/PVDF-45/25 | 1.0/0.45 µm | 25 mm    | 100       | 84212900 | 18% | 22090     |

## CHROMAFIL Xtra RC membrane material: regenerated cellulose

- Hydrophilic membrane with very low adsorption
- For aqueous and organic / aqueous liquids, i.e. polar and medium polar sample solutions
- Binding capacity for proteins 84 µg per 25 mm filter
- RC filters with integrated glass fiber prefilter\* (GF / RC) are recommended for solutions with a high load of particulate matter or for highly viscous solutions

Syringe filters, CHROMAFIL Xtra RC, Inside the syringe filter a regenerated cellulose is used as membrane material. The hydrophilic RC membrane is suitable for aqueous and organic – aqueous liquids, i.e. polar and medium polar sample solutions and shows a low binding capacity for proteins. Labeled for method validation and certification. All CHROMAFIL filters are autoclavable (121 °C and 1.1 bar for 30 min)!

| Cat NO.                | Type     | Pore size | Membrane | Pack size | HS code  | GST | Price (₹) |
|------------------------|----------|-----------|----------|-----------|----------|-----|-----------|
| <a href="#">729230</a> | RC-20/25 | 0.20 µm   | 25 mm    | 100       | 84212900 | 18% | 20090     |
| <a href="#">729231</a> | RC-45/25 | 0.45 µm   | 25 mm    | 100       | 84212900 | 18% | 20090     |

## CHROMAFIL RC membrane material: regenerated cellulose

Syringe filters, color coded, CHROMAFIL RC, Inside the syringe filter a regenerated cellulose is used as membrane material. The hydrophilic RC membrane is suitable for aqueous and organic – aqueous liquids, i.e. polar and medium polar sample solutions and shows a low binding capacity for proteins. All CHROMAFIL filters are autoclavable (121 °C and 1.1 bar for 30 min)!

| Cat NO.                | Type     | Pore size | Membrane | Pack size | HS code  | GST | Price (₹) |
|------------------------|----------|-----------|----------|-----------|----------|-----|-----------|
| <a href="#">729031</a> | RC-45/25 | 0.45 µm   | 25 mm    | 100       | 84212900 | 18% | 20090     |
| <a href="#">729236</a> | RC-20/13 | 0.20 µm   | 13 mm    | 100       | 84212900 | 18% | 20090     |

# Rapid Tests

Our test papers allow identification or semi-quantitative determination of more than 40 different substances. They give rapid results and are easy to use for an accurate on-site analysis.

## pH-tests

For many years untrained users as well as analytical professionals appreciate the experience of easy pH testing with pHIFix. In contrast to common indicator papers, the indicator dyes in pHIFix test strips are chemically bound to the test pads. This patented technology prevents bleeding of the dyes and therefore a contamination of the sample, even in highly alkaline solutions. The fixation enables the strips to remain in solution over extended periods of time allowing a safe pH determination even in weakly buffered solutions.

## pH indicator papers- (non-bleeding)

According to a comparative study, our MACHERY-NAGEL pH-Fix 0-14 test strips performed as the best! In various tests our strips delivered the most reliable pH values and the best marks in usability compared to the competitor product.

## PEHANON - pH measurement in colored samples

PEHANON test strips unify pH indicator and reference color chart in one strip. Any sample color has the same effect on both, the reference colors and the reactive pad, allowing unadulterated pH reading even in colored solutions.

## Universal indicator papers

pH indicator papers have been available for decades and are the standard for many applications. For each pH value these papers show a single color which can be matched with the color scale at intervals of 0.2–1 pH units. The indicator papers come in plastic reels that ensure long-term stability and protection against many external influences. They will be always ready-to-use when needed. MACHEREY NAGEL also controls the production of the raw papers which ensures – in combination with our ISO 9001 QC system – the high quality of the indicator papers. The colors of the scales are specially mixed to perfectly match the reaction color of the indicator papers. This makes the reading of results easy and accurate.

## Duotest and Tritest – pH papers with multiple indicators

pH papers with multiple indicator zones By the combination of several indicators on one test paper, a better recognition between different pH values is achieved. This makes the correct pH reading easier. Duotest – two indicator zones for higher accuracy Duotest indicator papers combine two different indicator zones on a single strip. The zones are separated by a hydrophobic barrier, which effectively prevents mixing of the reaction colors and increases the mechanical stability. Tritest – three indicator zones for highest precision Tritest indicator paper has three different indicator zones on a single paper. The three zones guarantee optimal color differences and safe determination of in-between values. Tritest indicator paper is available for a pH range from 1–11 and feature 1 pH unit increments. In Tritest L indicator paper, two hydrophobic barriers separate the indicator zones. Even in strongly alkaline solutions, the colors of the zones do not mix.

## Other pH indicators – Without color chart and solutions

Qualitative pH papers without color chart are simple, completely impregnated indicator papers. Unisol indicator solutions are used for pH determination in pure water, surface waters and very dilute acids or bases.

| Cat NO.               | Test                   | Measuring Range | Pack size | HS code  | GST | Price (₹) |
|-----------------------|------------------------|-----------------|-----------|----------|-----|-----------|
| <a href="#">90701</a> | Brilliant yellow paper | pH - 6.7–7.9    | 200       | 38220090 | 12% | 4090      |

## Qualitative test papers

### Simple test papers for qualitative determinations

These test papers come without a color scale. With little effort, the presence of ions and other substances can be detected. The test papers change color when the concentration is above the specified limit of detection.

#### Test papers for criminal investigations

Peroxtesmo KM is sensitive to peroxidase and detects blood traces.

Sperm traces can be detected using Phosphatesmo KM which is specific for acidic phosphatase. Both test papers are used in the investigation of crime scenes.

#### Test papers for milk analysis

The test paper Peroxtesmo MI allows the easy distinction between raw milk and high temperature milk. It is sensitive for the enzyme lactoperoxidase. In contrast to liquid indicators based on guaiacol, Peroxtesmo MI does not smell and comes without hazardous reagents which is convenient and safe for the user.

Phosphatesmo MI detects alkaline phosphatase in milk and is a rapid and easy indicator for the successful pasteurization of milk.

#### Test papers for oil and oil tanks

Oil test paper is recommended for the rapid determination of oil contaminations in water and soil. On contact with oil the paper turns dark blue.

AQUATEC allows the easy and reliable detection of water at the bottom of petrol and fuel oil tanks. It is also suitable to measure the thickness of water layers in oil separators.

Qualitative test papers come without a color scale. With little effort, the presence of ions and other substances can be detected. The test papers change their color when the concentration is above the specified limit of detection.

## Semi - quantitative test strips

Test papers and test strips for semi quantitative analysis are extremely simple to handle. They are based on the principle of “Dip & Read”. They are available for a variety of parameters and comply with all requirements of a modern rapid test. The evaluation of these tests is carried out by a comparison with a color scale.

### QUANTOFIX®

QUANTOFIX test strips meet all requirements of a modern rapid test. The reactive pad's color changes depending on concentration of an analyte. Evaluation is usually carried out visually by a comparison of reaction color with a multistage color scale. Some strips can be evaluated automatically on QUANTOFIX Relax reflectometer.

## Test strip reader – QUANTOFIX Relax

The QUANTOFIX Relax is the ideal device for the objective evaluation of our QUANTOFIX and pH-Fix test strips. It combines the simplicity of test strips with the safety of instrumental analysis and thus the best out of these two worlds. The QUANTOFIX Relax does not require any special strips, but evaluates the normal pHIFix and QUANTOFIX test strips. Therefore entrance into instrumental analysis is very simple; the same strip can be used for visual and instrumental evaluation.

# Water Analysis

All of our tests can be found listed by parameters in the first part of the catalog. So you can directly find the correct test for your needs. In the second part of the catalog we have compiled additional details for each individual test and equipment for you. We are a successful manufacturer of water analysis- and rapid tests for more than 60 years. A continuous development has always been important to us to meet your today's and future needs. If you have further questions or need additional advice, you can contact us at any time. Our friendly team of experts in Dueren and our competent sales team are very happy to be at your service.

## Visual test kits - Colorimetric and titrimetric test kits

Visual test kits can be evaluated by eye, without further equipment. They are divided into colorimetric test kits, which are compared to a color chart, and titrimetric test kits, where the amount of used reagent is related to the measured value. Some tests are also suitable for photometric evaluation.

### VISOCOLOR HE

VISOCOLOR HE test kits are highly sensitive colorimetric and titrimetric tests to determine even the lowest limiting values. The exact dosing of the single reagents as well as the compensation of turbidity and color are the basis for a highly precise analysis. Maximum sensitivity and accuracy are achieved by the use of longer measuring tubes and larger sample volumes. The sensitivity of VISOCOLOR HE is 10 to 100 times higher compared to other VISOCOLOR tests. The visual evaluation of the colorimetric test kits is done with high-quality color comparison disks, which are adjusted to the original color of standard solutions. Refill packs are available as replacement for consumed reagents. Every VISOCOLOR HE test kit is delivered in a robust box with plastic inlay and an easy to understand instruction leaflet.

## VISOCOLOR ALPHA

VISOCOLOR alpha is the most simple version of colorimetric and titrimetric test kits. These tests are suitable for visual evaluation only and are very convenient in performance, because of multicomponent reagents. Therefore, test kits are limited in precision and accuracy but represent an inexpensive method for screening tests.

## VISOCOLOR ECO

VISOCOLOR ECO presents a product group of colorimetric and titrimetric test kits, which allow even the determination of low limiting values with sufficient accuracy. The high sensitivity and accuracy is accomplished by single reagents which can be dosed precisely and by the possibility to compensate turbidity and color of water samples. The results are evaluated visually with high-quality color comparison cards, which are adjusted to the original colors of standard solutions. In addition, there is the possibility to evaluate most VISOCOLOR ECO tests also photometrically with the compact photometers PF-3 and PF-12Plus. This enables a quantitative evaluation of the test kit. Budget-priced refill packs are available for photometric evaluation as well as for replacement of consumed chemicals. All VISOCOLOR ECO test kits are delivered in a practical cardboard box with plastic inlay and easy to understand instruction manual. In addition, practical pictogram instructions are available for every test kit.
